

Big shears & cutters

Powerful & compact tooling

miniBOOSTER M-HC6D-013 intensifier systems allow you to build the most compact and powerful shears powered by a standard 200 bar system supply. The system can handle up to 350 bar inlet and can boost the pressure up to 700 bar, which enables maximum cutting force.

The 400 l/min bypass makes the cutter close almost instantly, securing high efficiency.

The market for environmentally friendly and efficient decommissioning solutions is rapidly growing, requiring many large steel structures to be dismantled.

The miniBOOSTER intensifier system can be delivered with 100, 200 or even 400 l/min bypass functions to enable full cutter movement at load (pressures) up to pump pressure. On top of that, the booster automatically activates to build up to 700 bar of high pressure.

You can order the intensifier system in either tube or flange mount versions for direct attachment to the cylinder.
