

# Oil Injection

## Removal of Wheels and Bearings

The electrically driven miniBOOSTER Power Pack is noiseless, generating only 64 dBa and offering a much better working environment for all users. Our customer, Paris RATP metro, uses the miniBOOSTER Power Pack for dismantling the couplings and wheels and shows satisfaction with the reliability and efficiency of the miniBOOSTER. This has encouraged RATP, as well as other customers, to enter into further collaborations.

High-pressure oil injection allows bearings and other components with an interference fit to be removed in a safe, controllable, and rapid manner. Similar methods can also be used for other applications such as couplings, gears, railway wheels and propellers.

Compared to the traditional air-driven Power Pack - a miniBOOSTER Power Pack offers a very fast and silent operation.
